Summary

Software Developer and Information Technology graduate (B.Tech, CGPA 9.12) with hands-on experience in full-stack web development, Android application development, and applied deep learning. Built projects including a medical image segmentation pipeline for Intracranial Hemorrhage detection (PyTorch, ResUNet), a full-stack lease management platform (React, Flask, SQLite), and a cloud-connected Android retail application (Kotlin, Firebase). Committed to writing reliable, maintainable software and contributing effectively within collaborative engineering teams.

Experience

Software Developer Aug 2026 – Present
Multitrade Softech Pvt. Ltd.

- Onboarding as a full-time developer, gaining hands-on exposure to the team's codebase, development workflow, and engineering tools.
- Building working knowledge of the relational database systems and data-handling practices used across the team's projects.
- Collaborating with experienced developers and following the team's version control and development practices.

Internships

Software Developer Intern (Python) 15 Jan 2026 – 14 May 2026
Multitrade Softech Pvt. Ltd.

- Worked as part of a development team on a confidential company project, contributing to assigned tasks and following the team's workflow.
- Designed and developed **NeuroSeg-ICH**, a personal deep learning project for Intracranial Hemorrhage (ICH) segmentation from brain CT scans, as my Semester 8 Internship/Major Project (graded AA), with guidance from company mentors.
- Implemented a custom Residual U-Net (ResUNet) in PyTorch trained with combined BCE + Dice loss to handle severe class imbalance; best validation Dice score **0.6304** (details under Projects).

Mobile Application Development Intern (Android) Jun 2025 – Jul 2025
Softcolon Technology Pvt. Ltd.

- Developed a cloud-connected Android retail application in Kotlin, integrating Firebase Realtime Database to manage structured user and product data.
- Modeled data entities (Users, Products, Wishlist, Cart) using unique identifiers to maintain data integrity and enable user-specific transaction tracking.
- Implemented case-insensitive product search and real-time badge updates using dynamic data listeners.
- Tested authentication logic, search accuracy, and cart consistency through unit testing, UI validation, and error-handling checks.
- Worked in Agile sprint cycles and used Git for version-controlled development.

Projects

NeuroSeg-ICH – Intracranial Hemorrhage Segmentation Pipeline GitHub
Python, PyTorch, ResUNet, Deep Learning, Medical Imaging *2026*

- Built an end-to-end deep learning pipeline for automated segmentation of Intracranial Hemorrhage (ICH) in brain CT scans, completed as my Semester 8 Internship/Major Project with mentor guidance.
- Implemented a custom Residual U-Net (ResUNet) from scratch with residual skip connections, improving gradient flow and feature reuse over a standard U-Net.
- Handled severe class imbalance with combined BCE + Dice loss (`pos_weight=20`) and ReduceLROnPlateau scheduling; trained on the PhysioNet CT-ICH dataset for 50 epochs.
- Achieved a best validation Dice score of **0.6304** (epoch 15 of 50) with precision ~0.74 and recall ~0.44; Dice reached **0.940** on the single best inference slice.
- Added an adaptive threshold search (0.1–0.9) at inference and generated CT overlays, ground-truth contours, and error maps for error analysis; tracked Dice, IoU, precision, and recall every epoch.

LeaseGen – Lease Management Application GitHub
React, Python (Flask), SQLite, JWT Authentication, PDF Generation *2026*

- Designed and built a full-stack web application for generating, managing, and downloading residential lease agreements, with live preview and one-click PDF export.
- Implemented JWT-based authentication with per-user data isolation; all API endpoints validate the token on every request and return `403 Forbidden` on unauthorized access.
- Built a lease management dashboard with search by tenant name or address, rent-range filtering, date sorting, and bulk actions (view, edit, duplicate, delete).
- Developed a reusable clause library and rental-law reference integrated into the lease creation workflow.
- Built a Flask REST API backend with SQLite for persistent storage and PDF rendering for printable lease exports.

Online Retail Store – Android Commerce Application GitHub
Kotlin, Firebase Realtime Database, Firebase Authentication *2025*

- Developed an Android retail application with secure authentication and dynamic product interaction tracking.
- Designed a data schema linking users with wishlist and cart entities for structured, session-based transaction logging.
- Implemented real-time database synchronization and documented the system flow and entity relationships.
- Tested search, discount logic, and session handling; proposed extensions such as inventory analytics and cross-device synchronization.

Technical Skills

Languages: Python, JavaScript, Java, C, HTML, CSS
Frameworks & Libraries: React, Flask, Node.js, PyTorch
AI / ML: Deep Learning, Medical Image Segmentation, ResUNet
Mobile Development: Android Application Development, Android Studio, Kotlin
Databases: SQLite, Firebase Realtime Database, Relational Database Fundamentals
Security & APIs: JWT Authentication, REST API Design
Programming Concepts: Object-Oriented Programming (OOP)
Tools: Git, VS Code, Cursor, Android Studio
Soft Skills: Effective Communication, Team Collaboration

Education

Bachelor of Technology in Information Technology Jun 2026
Gandhinagar University (Gandhinagar Institute of Technology) *CGPA: 9.12 | SGPA (Sem 8): 9.67*

Certifications & Achievements

- Best 7th Sem Project Award (2025), Gandhinagar University
- Internship Completion Certificate, Software Developer (Python) – Multitrade Softech Pvt. Ltd. (2026)
- Internship Certificate, Mobile Application Development – Softcolon Technology Pvt. Ltd. (2025)
- JPMorgan Software Engineering Job Simulation – Completion Certificate
